53 Charlton Dene, London, England

- Achieved a 20% increase in youtube traffic/views for supernatural brainwave powers ltd's youtube channel using animations, image generation and video editing.
- Developed shorts and long videos that increased viewers and interaction using Adobe premier pro, photoshop, and AI.

PROJECTS

Live Weather App. Built a live weather app to view the live weather data for Edinburgh by using Html, CSS, Javascript, php and mysql. I used an API from openweather.org to access the weather data and then store those weather data in database and send it to the frontend. ([Try it here](#))

AIMS. Built a Agriculture Management System that provides agriculture, weather and crops data to farmers and sellers. It also provides other features so that the farmers and sellers can contact and work with each others. I built it using Reactjs, Html and CSS. Backend is yet to complete as i am currently focusing on another project. ([Try it here](#))

LMS. Currently building an Online Learning Management System that eases the learning process and reduces the challenges caused by the conventional learning methods. I am building this project for my Final Year Project using Reactjs, Nodejs, Expressjs and MongoDB (MERN Stack).
